Second Review on Simrel Paper

Raju Rimal, Trygve Almøy and Solve Sæbø

As being a journal related to chemometrics, it is desirable to present an example that are more common in the field. We are thankful for your proposal of an example with a wide predictor matrix. We have now added a second example with wide predictor matrix where $(p > n)$. In this current revision, we have subdivided section 4 (Implementation) (now starts page 13) into two parts: Example 1 and Example 2. Before Example 1, we have changed a sentence as follows,

> *This section demonstrates an application of multi-response extension of* `simrel` *with two examples in order to compare different estimation methods on the basis of prediction error. These example are simply a demonstration of the use of* `simrel` *package rather than an extensive comparison of methods.*

After the first example, we have added a second example starting from page 17 until page 20. The "Web Interface" section starts from page 20 now. In addition, Figure-4 is now at the top of page 18. A new figure has been added relevant to second example is on page 20.
